

Web Development

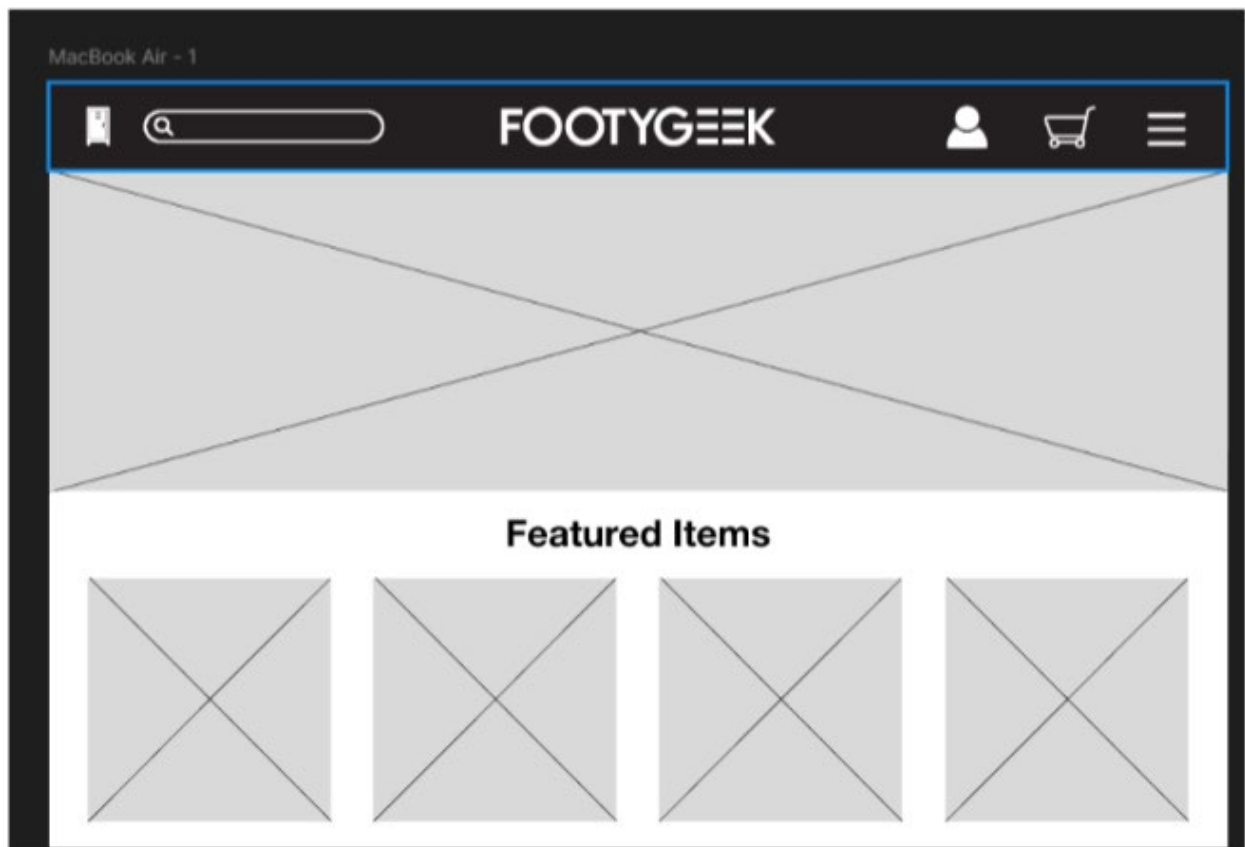

Task 3

By Rebekah Borg Caruana

GRD 6.1

Section 1

No.1

Input	Process	Output
Homepage (Footygeek)	Navigation bar & Featured Items loading	Homepage loaded

No.2

MacBook Air - 9

FOOTYGEEK

Create New Account

Sign up with Google 

Name Surname

Email

Password

Register

Input	Process	Output
Click Profile Login Icon	Sign up with Google /Fill in Name, Surname, Email, Password	Registration & Login with enter details after

No.3

MacBook Air - 8

FOOTYGEEK

Sign In

Email

Password

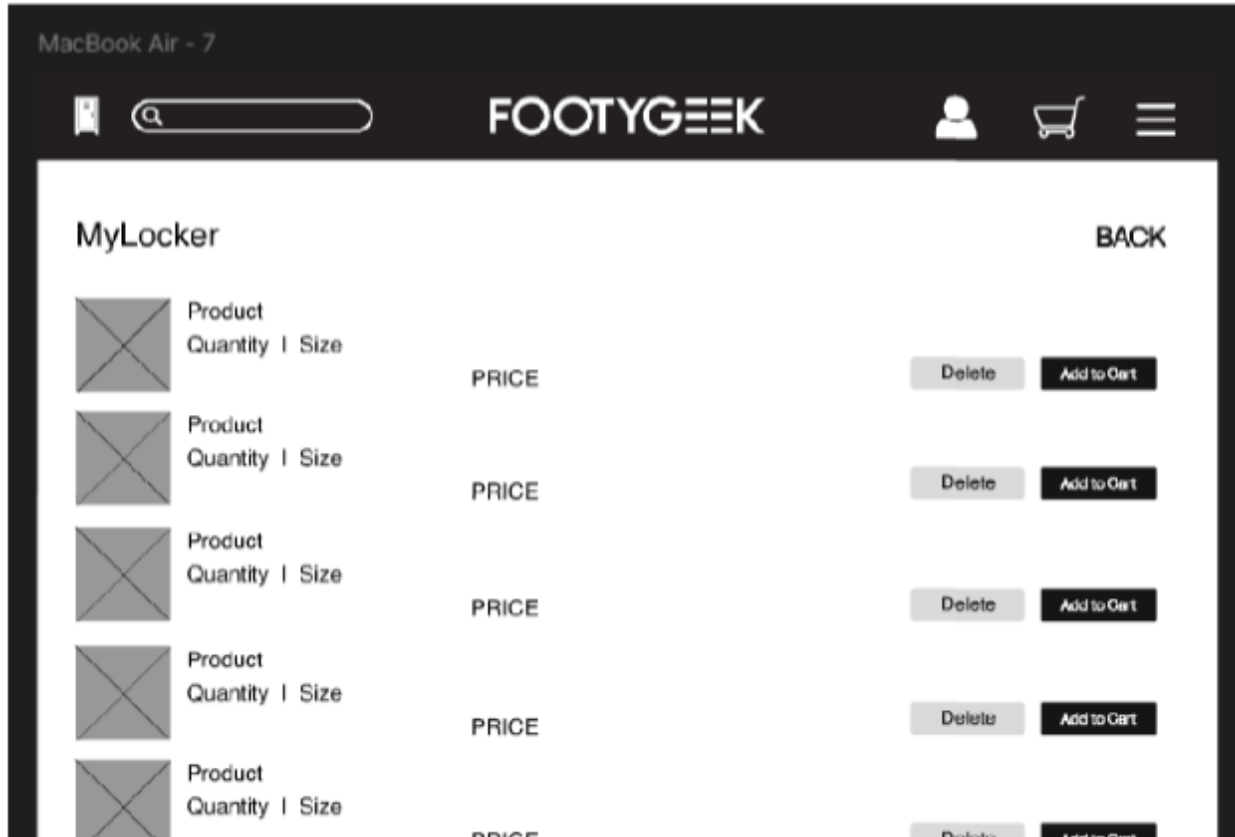

[Forgot Password](#)

Sign In

Create Account

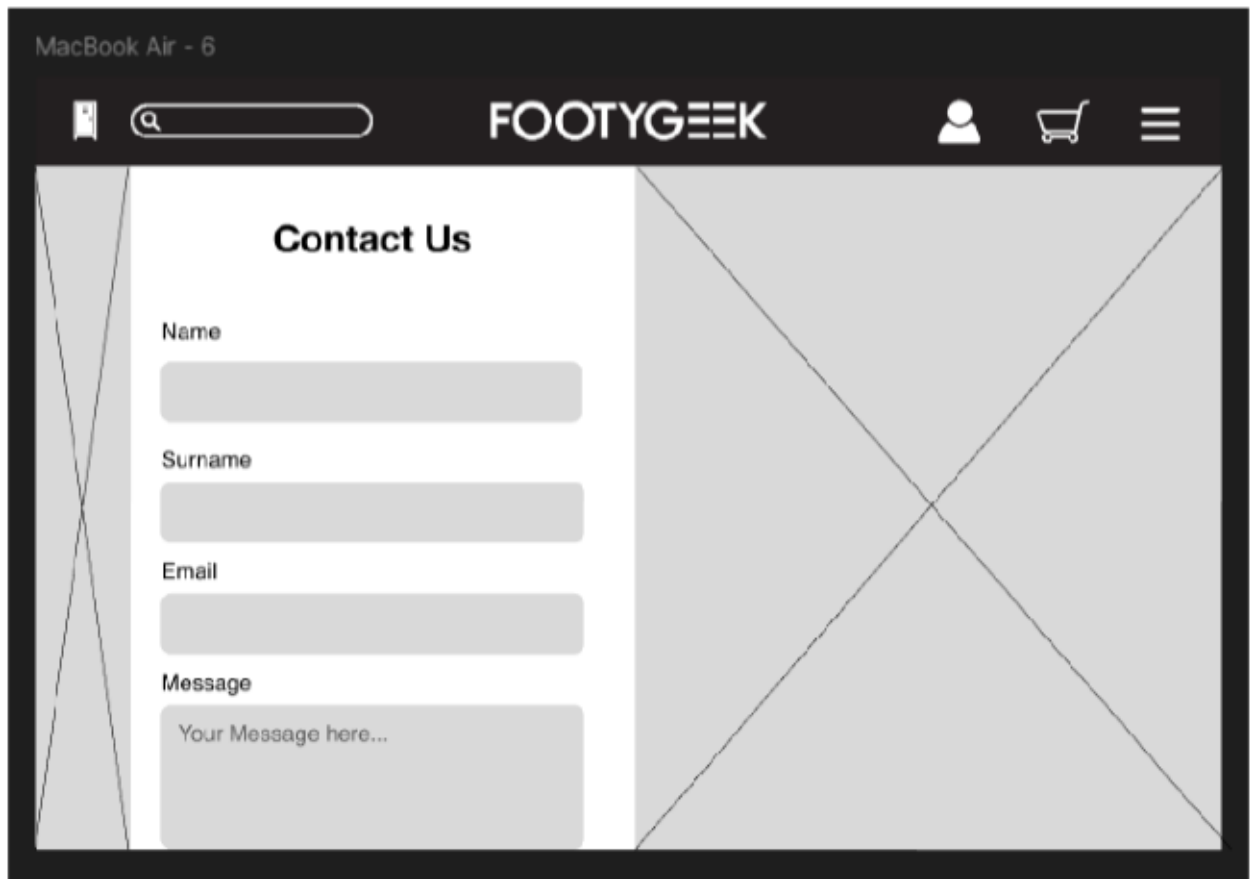

Input	Process	Output
Enter email and password, Press Sign In	Signing in	User will be signed into account
Forgot Password	Fill in details such as email, phone number or other	User will regain access to account

No.4

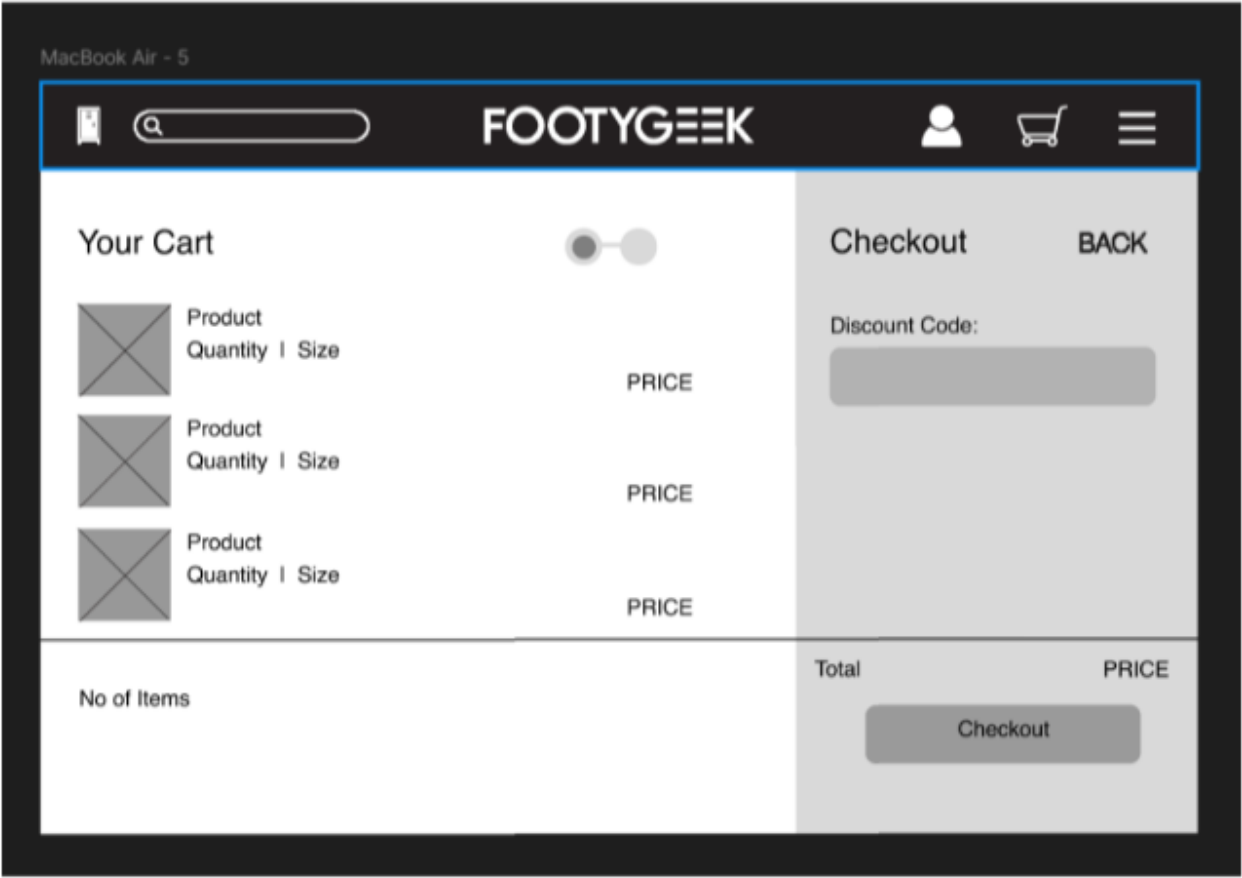

Input	Process	Output
Items in Wishlist	Add to cart	Items added to cart
Delete	Deletes item from wishlist	Item deleted

No.5

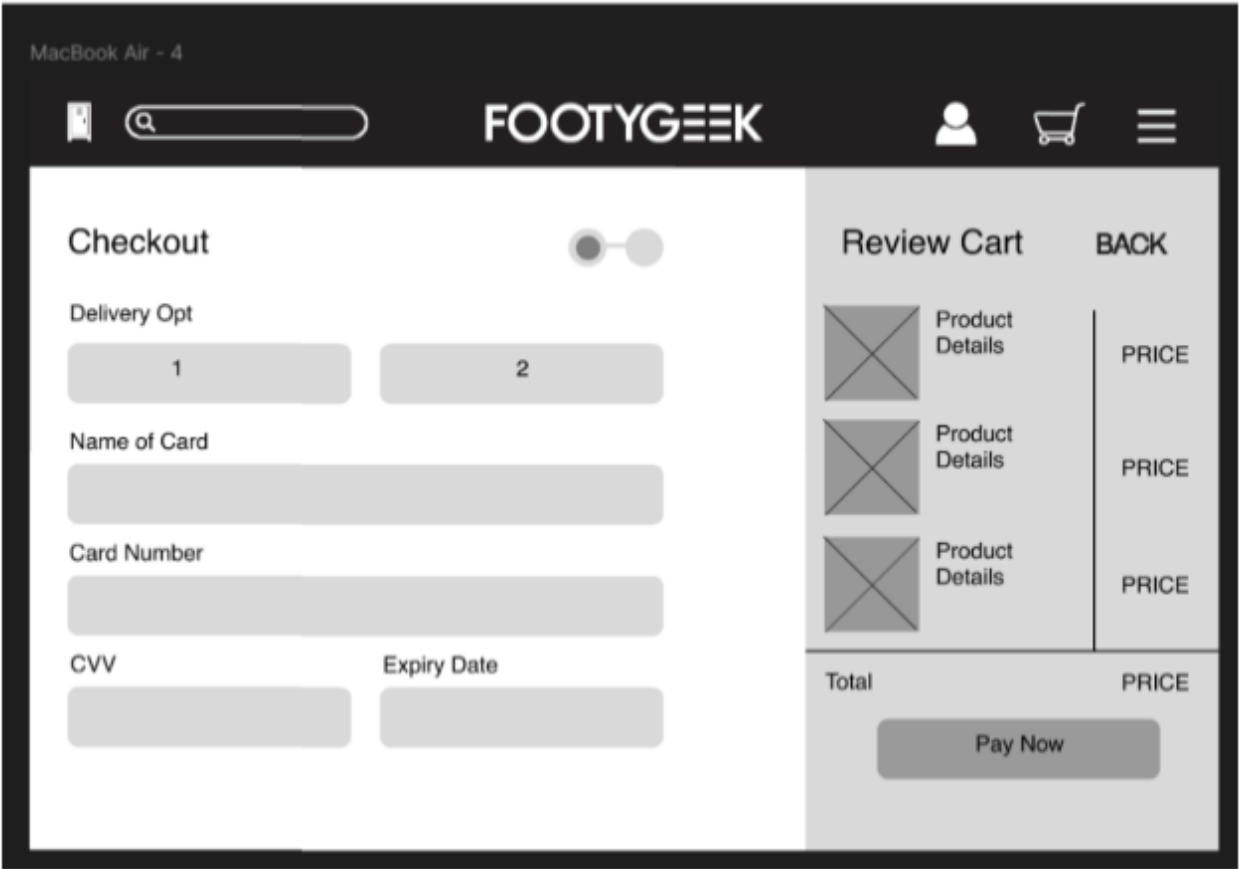

Input	Process	Output
Press contact page	Contact page loading	Contact Page loaded
Fill in personal details & message	Sends to recipient	Message sent to inbox of website owner/other

No.6

Input	Process	Output
Click on cart + Insert discount code if any + Press checkout	Loading Payment Page	Payment page where card details can be inputted

No.7

Input

Select Delivery Option & Enter card details, Select Pay Now

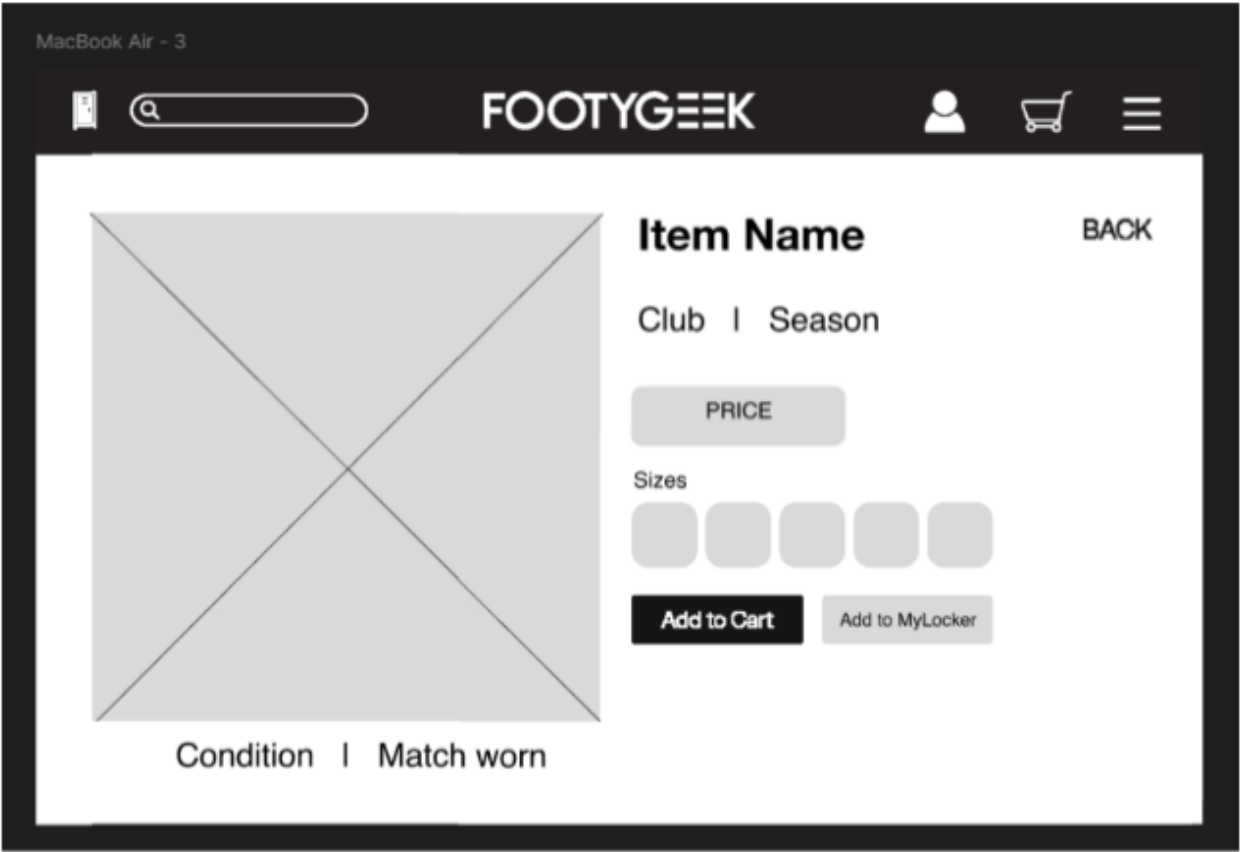

Process

Site retrieving money through chosen payment method

Output

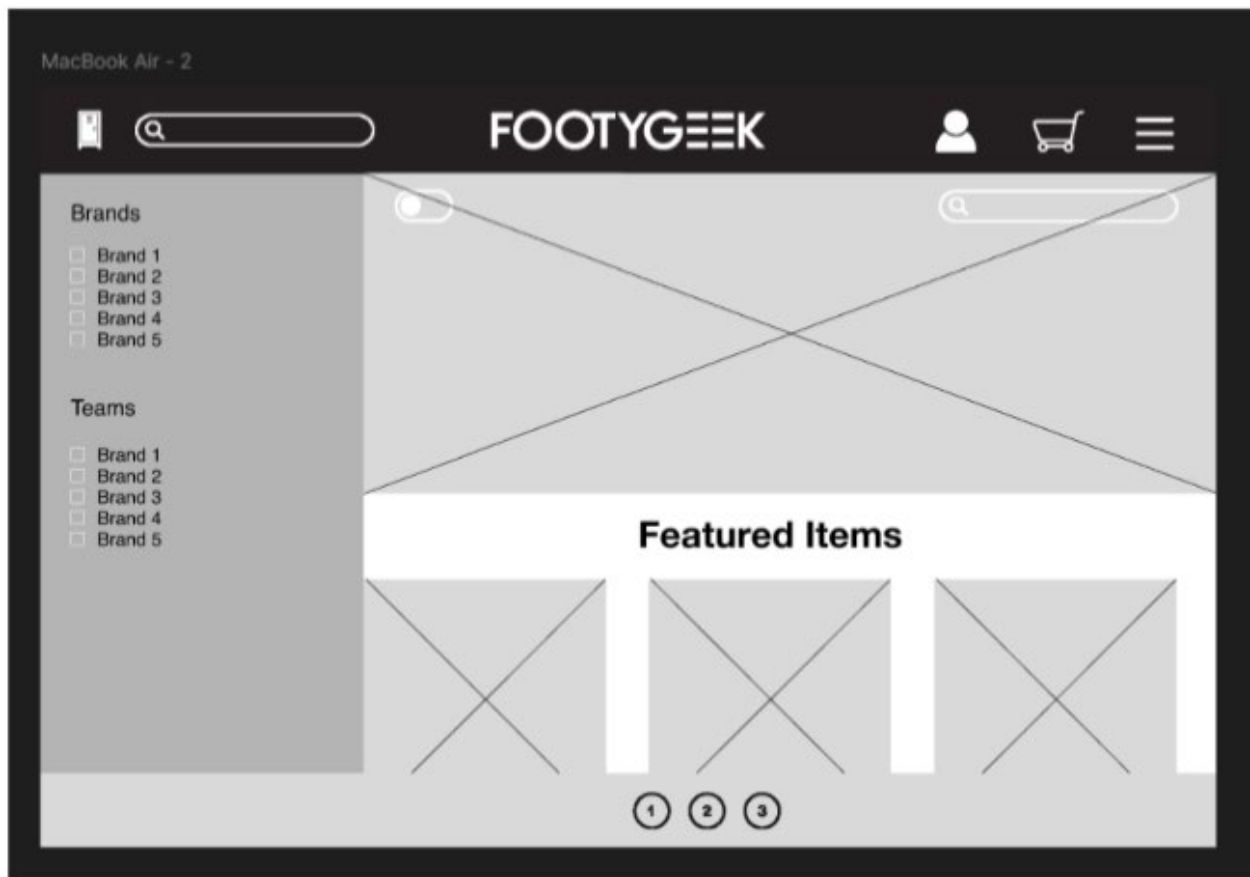

All items in shopping cart are paid & an email and notification with shipping details & confirmation of payment & a message from personal bank should be received

No.8

Input	Process	Output
Item is clicked on, Size chosen, Add to Cart	Adding item in chosen size, to cart	Item added to cart
Item is clicked on, Add to MyLocker with chosen size	Item is being added to the wishlist "MyLocker"	Item is saved in MyLocker and easily findable in case consumer decided to purchase the item

No.9

Input	Process	Output
Hamburger menu clicked	Menu loading	Various brands & Teams are now viewable

Section 2:

Test Case ID	Test Case Objective	Pre-requisite	Steps	Input Data	Expected Output	Actual Output	Status
TC_01	MyLocker img	Homepage should be clickable and lead to homepage	1.Click on homepage 2.Homepage loads	Click homepage	Homepage Loads	Nothing Loads; an error is given	FAIL
TC_02	Search	Relevant results should appear and if none, the user should be informed that relevant results were not found	1. Type in "keyword/s" 2. Press search button 3. Page loads relevant items & says if none are found	Typed "top" & pressed enter (no search button provided)	Results show up if any or "Not found" or equivalent should appear	The page initiates loading but nothing changes	FAIL
TC_03	Menu	Menu icon	Click on Menu	Clicking on Menu	Menu loads	The page initiates loading but nothing changes	FAIL
TC_04	Profile	Profile account details/login should appear	1. Press Profile 2. Option to Sign in if already have an account 3. Option to Register if you are a new user 4. View purchase history if any	Clicking on Profile	Option to Sign in/Register or view previous purchase history	Page redirects and says file was moved, edited or deleted	FAIL
TC_05	Shopping Cart	View items added to cart if any	1.Click on shopping cart 2. If no items are added, it should be written 3.If items are added you should have the option to remove from basket, click on item, change size	Add to cart	Item should be added to cart/if not available anymore, it should say that "this item is unavailable" or anything to that effect	Page redirects and says file was moved, edited or deleted	FAIL

			if relevant, and also move to wishlist or go to checkout				
TC_06	Menu	Menu should be viewable with various other tasks that the user might be interested in	1. Click on Menu 2. View clickable options that would be of interest to users	Click on menu	Menu opens up with various clickable options	Page redirects and says file was moved, edited or deleted	FAIL
TC_07	Shop	Shop should be a viewable separate page	1. Click on Shop 2. View available options	Click on Shop	All purchasable items should appear on this page	Page redirects and says file was moved, edited or deleted	FAIL
TC_08	Order Tracker	This should be seen when something is purchased from the site	1. Click on 'Order Tracker' 2. Information on what options are available, various prices & eligibility & ineligibility should be specified here	Click on Order Tracker	All tracking options available for chosen items/countries should be shown	Hyperlink changes colour when clicked but does not redirect to anything	FAIL
TC_09	Contact Us	This should make a contact form available	1. Click on Contact us 2. Wait for a Contact form to load	Click on Contact Us	Usually name, email and message should be the bare minimum information the user would have to fill out	Hyperlink changes colour when clicked but does not redirect to anything	FAIL
TC_10	Images 01-05 + Previous/Next	Images should be in a	1. Click on Previous & Next to	Click on Previous & Next	The user should be able to cycle	Previous and Next are	FAIL

		carousel and should be viewable one at a time by means of the "Previous" and "Next" buttons	cycle through the images 2. View images		through relevant images to the page	clickable but nothing happens when clicked, Images cannot be seen, Images cannot be seen one by one as in a carousel	
TC_11	Add to Cart	Respective Item should be added to cart	1. Click on add to cart 2. Basket should add the quantity selected	Click on Add to Cart	Item should be added to cart	Hyperlink changes colour and tries to load but nothing happens/in other cases it seems to have been linked to a file that no longer exists, was edited or deleted	FAIL

Section 3

Validators used:

<https://validator.w3.org/> for html

<https://validator.w3.org/check> for css & bootstrap

Comments on Findings

Technical Comments

Within the html code, the errors consisted of too many spaces within links. The trailing slash (/) was used on void elements, meaning it was used where it was not necessary such as `<input class="form-control me-2" type="search" placeholder="Search" aria-label="Search" />`. When the slash of a closing tag is used as shown prior, it has no effect and causes bad interaction with unquoted attribute values. There were also many open elements and stray end tags throughout. On a more positive note, both bootstrap pages had no errors.

General Comments

- Planning of wireframes was good
- Better time management to put planned wireframes into reality
- Mistakes found could have been easily avoided
- Creating a main css file and using bootstrap & java script for specific elements only as the styling of the pages was not perceivable
- It was also not operable at all due to buttons not working and the UI not present at all
- UX was also very poor due to the previous comment

Section 4

Suggestions to improve project

Better time management to put wireframes into a functioning website.

Creating a plan with all the objectives your site must reach.

Do something small every week, dedicate an hour or a day per week.

A functioning shopping cart is a bit complex to show and there are a lot of steps to show. If not comfortable with coding perhaps a portfolio website or a blog would have been simpler to execute.

Allow time to get feedback too.

To plan a good website patience, attention to detail, time management, constant personal deadlines to make sure you progress. A feedback loop and perhaps working around people or in a coffee shop when possible, can also help productivity.

A light/dark mode button would have been useful and complimentary to the chosen style whilst also increasing accessibility. Perhaps embedding a voice reader together with “alt text” are also possibilities which could further cater for a more diverse audience.
